**FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF SECRETARY**

Re: Ex Parte Presentation -- CC Docket No. 96-98
Implementation of the Local Competition Provisions of the
Telecommunications Act of 1996

Dear Mr. Caton:

On Wednesday, July 24, 1996, Bruce Cox, Joel Lubin and I met with Richard Metzger, Larry Atlas, Donald Stockdale, and Anna Gomez to discuss AT&T's previously stated position in the above cited proceeding. The attached material was furnished to the attendees.

Two copies of this Notice are being submitted to the Secretary of the FCC in accordance with Section 1.1206(a)(1) of the Commission's rules.

Sincerely,

A handwritten signature in cursive script, appearing to read "R. Gerard Salemma".

ADJUSTMENTS MADE TO 1994 CALENDAR YEAR EMBEDDED LOOP COSTS REPORTED BY THE LECs

1. Adjustments made to the booked (embedded) amounts reported by the LECs on the Universal Service Data Collection Form. The adjustments to selected accounts effectively remove the "retail" portion of the embedded costs from the calculation of an average cost per loop for each LEC. The following accounts were adjusted:

....**Account 6120 - General Support Expenses**. 20% of the booked amounts were removed from the calculation of an adjusted average cost per loop. GSF expenses are associated with Land & Buildings, Furniture & Artworks, Office Equipment, and General Purpose Computer expenses.

....**Account 6220 - Operator Systems Expenses**. 100% of the booked amounts were removed from the calculation of adjusted average cost per loop. Operator Systems Expenses are associated with operator systems equipment.

....**Account 6530 - Network Operations Expenses*****. 20% of the booked amounts were removed from the calculation of an adjusted average cost per loop. Network Operations Expenses are associated with Power, Network Administration, Testing, Plant Operations Administration and Engineering. →

***The avoided cost model only addressed Account 6533 - Testing, and Account 6534 - Plant Operations Administration. Work will be done to estimate what portion of total Account 6530 these expenses represent. By including all Account 6530 as subject to the 20% avoidable factor, our adjusted loop cost may be understated.

....**Accounts 6710 - Executive & Planning and 672 - General Administration**. 20% of the booked amounts were removed from the calculation of an adjusted cost per loop. These expenses include Executive, Planning, General, Administration, Accounting and Finance, External Relations, Human Resources, Information Management, Legal, Procurement, Research and Development, Other General and Administrative, and Provision for Uncollectible Notes Receivable.

2. Certain accounts are not reported in connection with developing an average cost per loop in the Universal Service Data Collection Form. These include:

....**Account 6610 - Marketing Expenses**. Product Management, Sales and Product Advertising are booked in this account.

Account 8820 - Services Expense. Call Completion Services, Number Services, and Customer Services (establishing and servicing customer accounts.)

WHO IS REALLY COMMITTED TO UNIVERSAL SERVICE?

UNIVERSAL SERVICE FUND - The most recent tariff filed by NECA (5/17/96) contains rates for the USF for the period 7/1/96 through 12/31/95 quantifies an annual USF of \$753.1M in 1996. The fund is paid for only by IXC's that have in excess of 1/20th of one percent of the nationwide presubscribed lines.

LIFELINE ASSISTANCE (End User Subscriber Line Charge Waiver program and the Link-up program) - In the same tariff filing, the annual Lifeline Assistance for 1996 is \$167.6M, once again funded solely by IXC's. The end user SLC waiver portion is \$148.2M and the Link-up is \$19.4M. The total \$167.6M is recovered from IXC's. While the states may also ante up some support from tax revenues or other sources to "match" what the Federal contribution to the End User SLC waiver is (states are required to match), the total federal subsidy of \$167.6M is paid for by IXC's.

Total federal USF and LA programs for 1996 amount to \$920.7M. This amount is funded by 47 IXC's whose presubscribed line share (PSL) is more than 1/20th of one percent of the total. Based on PSL share, an estimate is that AT&T will pay approximately \$617M, MCI \$142M, Sprint \$60M, LDDS 25M with the remainder picked up the other 43 smaller IXC's.

In a broader view of universal service, IXC's of course are required to pay significant subsidies in access charges. The interstate CCL is approximately \$3.5B, and the RIC is about \$2.5B.

AT&T has consistently been supportive of appropriate subsidies to low-income consumers. This has been articulated in the Comments and Replies rendered in numerous CC Docket 80-286 proceedings, and most recently in CC Docket 96-45.

The BOCs, on the other hand, have consistently taken moneys from IXC's and spun a story that they and ONLY they are the ones committed to preserving Universal Service.

SMITH BARNEY

Telecommunications Services

SP07D225

- *Key defined dates for implementing the Telecommunications Act of 1996 are August 8 (interconnection rules) and November 8 (subsidy recommendations).*
- *First FCC decision on Bell entry into long-distance: 4Q96-1Q97.*
- *We expect pricing and subsidy decisions to be even-handed but move industry toward cost basis.*
- *FCC views on Bell long-distance entry unclear. We expect such entry by mid-1997.*

July 12, 1996

REC'D 7/23

- Closing price of AT&T stock as of July 12, 1996 - 58 27/32, which equates to 58.844.
- As of Monday's closing, the composite pricing showed AT&T at 51 5/8.
- As of 1:00 p.m. today (7/23/96), both the NYSE and the composite showed AT&T at 51 1/8, or 51.125. This number reflects a loss of more than 13% or \$7.72 per share.
- This decline equates to a loss of \$12.5B market cap or wealth to AT&T investors in the past week alone.

Q. In summary, what will be the key elements to look for in the interconnection ruling to determine whether this is a good or bad decision from a telephone industry standpoint?

A. The FCC decision will probably be complex and take some time to analyze. However, the key elements that would make this a reasonable decision from a telco standpoint are the following:

- Either the CRPBM cost methodology (unlikely) or the TELRIC methodology with inclusions of overheads and common costs.
- Network unbundling limited to six to eight elements (the FCC's Notice of Proposed Rulemaking lists four elements).
- Full telco recovery of the access subsidy (either through prohibition of IXC purchase of unbundled elements for access or, if such purchase is permitted, through additional IXC payments).

LONG DISTANCE INDUSTRY REPORT

06:06am EDT 22-Jul-96 Smith Barney (SCHELKE/HOPAN (212) 916-6254) T FOM MCIC

---SUMMARY:---

- * We have just completed a review of the long-distance industry which will be published today, July 22.
- * The study reinforced our previous outlook that the aggregate profitability of the long-distance operations of the Tier 1 companies will slow significantly and, for some companies such as AT&T, decline beginning in 1997/1998.
- * The basis for these concerns is due to the fact that we believe that the Tier 1 companies have more to lose than they do to gain from the recent Telecom Act of 1996 (see comments below).
- * We reiterate our 3M ratings on T, MCIC* and WDCM* and our 2M rating on FON#. However, we believe the both MCI and FON are priced at the point where they could have a trading rally.

---OPINION:---

We have just completed an in-depth review of the long-distance industry which will be published today, July 22. The study reinforces our previous outlook that the aggregate profitability of the long-distance operations of the Tier 1 companies will slow significantly and, for some companies such as AT&T, decline beginning in 1997/1998. The basis for these concerns is our belief that the Tier 1 companies have more to lose than they do to gain from the recently passed Telecom Act of 1996. As a result of this legislation, the Bells will be able to enter the highly profitable long distance market without much difficulty. Concurrently, long-distance companies will be entering the local-exchange market, although we believe that it will prove unprofitable for them to do so, at least in the short term. We believe that the increased competition in long-distance will be severely detrimental to earnings to the Tier 1 companies for the following reasons:

(1) MORE CAPACITY. As competition intensifies, long-distance pricing will increasingly come under pressure due to the huge disparity between transport and end-user rates. Transport essentially costs about \$0.01/minute vs. end-user rates of \$0.10/minute, net of access. The availability of this cheap transport creates a significant opportunity for profitable resale.

(2) DECLINING PRICING. The Big Three (AT&T, MCI and Sprint, which have over 50% of the market) are especially vulnerable to competition in the hugely profitable international segment of the market, which accounts for over 50% of their operating income. Historically, competition in this market has been limited by governmental entry barriers; as these barriers are removed over the next several years, the huge profitability of this market will attract numerous competitors, which in turn will drive prices down to costs. The long distance companies' costs to provide international are less than \$0.10/minute, compared to the \$0.90/minute average retail price.

(3) ENTRY INTO LOCAL-EXCHANGE WILL NOT PROVIDE A FULL OFFSET. To offset the competitive pressures in their core businesses and to meet the long-term challenges of the Bells and other competitors, the Big Three must enter the local exchange market. However, it appears that resale discounts will only be in the 15%-20% range (vs. about 90% in long-distance), which is not enough to provide profitable resale, in our opinion. Thus, AT&T, MCI and Sprint will probably provide local exchange service through a combination of resale and owned facilities. Developments of the latter will be a costly and time consuming process and, in the initial years, will put pressure in earnings.

Based on this analysis, we reiterate our ratings of 3M (Neutral, Medium Risk) on AT&T and MCI*; 2M (Outperform, Medium Risk) on Sprint# and 3H

(Neutral, High Risk) on WorldCom*. However, the "Big Three" stocks have become significantly cheaper since we finished our report and we do believe that both MCI and FON are relatively cheap here and could rebound by 10%-15% near term.

* Smith Barney usually maintains a market in the securities of this company.

Within the last three years, Smith Barney or one of its affiliates was the manager (co-manager) of a public offering of the securities of this company or an affiliate.
